

Rucksack 27.0

Climbing harness and rucksack all-in-one

The challenge

SKYLOTEC has taken it upon itself to constantly develop new innovations. The patented Rucksack 27.0 is a prime example of this.

The basic idea was to design a rucksack with a built-in harness to make it quicker and easier to use with a via ferrata set. You'll never have to search for your harness again!

The solution

The harness is integrated into the rucksack's hip fin and can be done up without having to take the rucksack off. This makes it much faster and easier to tie on. The harness and rucksack can also be used separately. The rucksack has a 27-litre capacity and a 3 step venting system to keep the back cool. Additional detailing includes a side pocket for a drinks bottle.

The 27.0 Rucksack is made of a durable but lightweight PES / 3D mesh materials, which also make it suitable for glacier tours and alpine climbing.

27.0:

- Weight: 1200 g
- Material: PES / 3D mesh
- Ventilation system: 3-STEP VENTING
- Volume: 27 litres
- Retail price: 149,95 €

Characteristics:

- Patented rucksack/ harness system
- 3-STEP VENTING ventilation system
- Robust and lightweight
- Unique design
- Designed for quick and easy tying with a via ferrata set
